

prompts.pdf - AI Prompts Used for ReelGenie & ThreadGenie

Project Kickoff

Prompt: I'm building a project called ReelGenie. It generates AI-powered scene prompts and images for short-form video creation. Help me plan the architecture and pick a tech stack with a focus on free AI APIs.

Pivot to ThreadGenie

Prompt: Video generation is too costly with Kling AI and others. I want to pivot to a Twitter-thread model. How can I use generated scenes and narration as tweet content?

Backend Development

Prompt: Write a Node.js Express API called /postTweetThread that accepts an array of tweets and posts them to Twitter as a thread using twitter-api-v2.

Prompt: Implement retry logic and error handling for Twitter API errors like 401 and 429.

Frontend & UI Prompts

Prompt: Build a TweetThread React component styled like real tweets using TailwindCSS and react-tweet.

Prompt: Improve layout: center the title between back and publish buttons and show logs above tweets.

Prompt: Add skeleton loading for images and show tweet text immediately.

Refinements & Fixes

Prompt: Fix button color hover state to match the app theme.

Prompt: Fix issue where prompt button only works on second click.

Prompt: Make templates section cleaner with better shadows and spacing.

System Design & Planning

_prompts.pdf - AI Prompts Used for ReelGenie & ThreadGenie

Prompt: Help me document the architecture for ReelGenie + ThreadGenie: frontend in React, backend in Node.js, Gemini API for script generation, and Twitter API for publishing threads.

Prompt: I need to describe how API limitations led to changing direction from video generation to static image + thread-based storytelling.

Twitter API Integration

Prompt: How do I authenticate with Twitter API v2 using twitter-api-v2 in Node.js?

Prompt: Whats the correct way to use client keys, access token, and bearer token to upload media and post tweets?

Deployment & Setup

Prompt: Provide full setup instructions for local development with .env files and deployment to Vercel.

Prompt: How do I structure my README with planning artifacts and AI tool credits?
